

**DISTRICT SURVEY REPORT (DSR)  
OF  
BALASORE DISTRICT, ODISHA.  
FOR  
ROAD METAL/BUILDING STONE  
(FOR PLANNING & EXPLOITATION OF MINOR MINERAL  
RESOURCES)**

As per Notification No. S.O. 141(E) 15th January 2016 & 3611(E) New Delhi dated 25th July 2018 of Ministry of Environment, Forest & Climate Change (MoEF & CC)

**(Prepared by Sub-Divisional Committee under Guidance  
of the Collector & District Magistrate, Balasore)**

5	Horticulture Land	27
6	Annual Rainfall Data (2019–2025)	35
7	Details of mining lease of road metal/building stone/black stone in the district	38-85
8	Details of royalty or revenue received in last three years	86
9	Detail of production of minor minerals in last three years	94-101
10	List of letter of intent (LOI) in the district along with its validity	103-138
11	Total mineral reserve available in the district	139-146
12	Demand for various developmental projects	148
13	Total Number of TB cases in Balasore District of last 5 years	157
14	Plantation green belt development in respect of lease already granted in the district	159-164

## PREAMBLE

Odisha is one of the Major Mineral rich State in India. Balasore is a unique District in Odisha lies on the Northern most part of the State with rich and varied mineral resource. It is a paradise for Geoscientists of India and abroad. It has preserved many important rock groups from the earliest of crust formation to the geologically recent times. The landmass constituting the Balasore District, explorers to many Entrepreneurs on account of its diverse geological setting and rich and varied mineral resources. The Erstwhile Ministry of Environment and Forests (MoEF), (the Government of India, made Environmental Clearance (EC) for mining of minerals mandatory through its Notification of 27th January, 1994 under the provisions of Environment Protection Act, 1986. Keeping in view the experience gained in environmental clearance process over a period of one decade, the Ministry came out with Environmental Impact Notification, SO 1533 (E), dated 14th September 2006. The Ministry of Environment, Forests & Climate Change (MoEF & CC), Government of India had amended the said vide notification S.O. 141(E) Dated 15th January, 2016. Now again Ministry of Environment, Forests & Climate Change (MoEF & CC), Government of India amended the notification S.O. 141(E) Dated 15th January, 2016 vide S.O. 3611(E) Dated 25th July, 2018. It has been made mandatory to obtain environmental clearance for different kinds of development projects as listed in Appendix-X of the Notification. In compliance to the notification issued by the Ministry of Environment and Forest and Climate Change Notification no. S.O.3611 (E) NEW DELHI dated 25-07-2018 the preparation of district survey report of sand mining has been prepared in accordance with Clause II of Appendix X of the notification. Every effort has been made to cover river sand mining locations, future potential areas and overview of sand mining activities in the district with all its relevant features pertaining to geology and mineral wealth. This report will act as a compendium of available mineral resources, geological set up, environmental and ecological set up of the district and based on data of various departments like Revenue, Water Resources, Forest, Geology and Mining in the district as well as statistical data uploaded by various state Government departments for preparation for district survey report. The main purpose of preparation of District Survey Report is to identify the mineral resources and developing the mining activities along with other relevant data of the District.

The Main objective of the preparation of District Survey Report is to ensure the following: -

1. Identification of Mineral Resources in the District.
2. Identification of areas of minor minerals having the potentiality where mining can be allowed.
3. Identification of area and proximity to infrastructure and installations where mining should be prohibited.

# 1. INTRODUCTION

## 1.1 History:

Balasore is one of the coastal Districts of Odisha. It lies on the northern most part of the state. It was a part of the ancient Kalinga which later became a territory of Toshal or Utkal, till the death of Mukunda Dev. Balasore as a separate District was created in October 1828. Originally it was in Bengal presidency. Balasore also gets its name from the Persian word Bala–e–Shore, meaning ‘Town in the sea’. Historical legend ascribes the naming of this District as per Lord Baneshwar (Lord Shiva) of the town, which subsequently changed to Balasore during the Mughul rule. There are many historical monuments in the Balasore District. Some of the major monuments in Balasore District includes the rich sculptural remains found in Ayodhya. The ruin of the old Buddhist monastery and temple is there in Kupali in Balasore District. Some of the ruined forts at the Jayachandi forests in Raibania are also there in the District. The major religious monument found in the District is the Lord Chandaneswar Shrine. There are beautiful sea beaches and many temples attract local and national tourists. Chandipur, Talasari sea beach, Chawmukh sea beach, Kashaphal sea beach are the famous sea beaches of the District. Temples like Panchalingeswar, Khirochora Gopinath, Langaleswar, Laxmannath, Chandaneswar, Maninageswar are the point of attractions.

## 1.2 Location and Geographical Area:

Balasore is the District Head Quarter, spreading over an area of 3634 sq.km lies between 20° 48’ North to 21° 59’ North latitudes and 86°16’ to 87°29’ East longitudes. The District is surrounded by Medinipur District of West Bengal on its Northern side, Bay of Bengal on its East, Bhadrak District on its South and Mayurbhanj & Keonjhar Districts lies on its Western side. It is best known for Chandipur Beach. The Indian Ballistic Missile Defense Program's Integrated Test Range is located at a distance of 18 km towards south of Balasore. It is the largest city of North Odisha. This District consists of two Sub-Divisions namely Balasore and Nilgiri. There are 12 Tahasils for 12 Blocks of this District.

Balasore is the main town as well as the Centre of Economic Growth in the district. The primary occupation of people in the District is cultivation. This District is mainly known for cultivation of paddy. Industries, Agriculture, Fishing and Tourism are the four major Revenue sources of Balasore District. Birla Tyres, Balasore Alloys Limited, Emami Paper Mills Limited and Polar Pharma India Limited are some of the Large–Scale Industries functioning in this District. Balasore occupies a unique position being endowed with lush green vegetation, different fauna & flora and rich Cultural Heritage. The District has a rich mineral base of river sand, and Road Metal which are mainly used in construction purpose in the District. The huge deposits of granite

stones at Nilgiri, Khaira, Soro region provides tremendous scope for development of few more Industries based on these resources. Except these, no major mineral in large quantity which can be explored for commercial purpose found in the District. The location of the District has been presented in a map below.

### 1.3 Administrative Units: -

Balasore is the Administrative Headquarter of Balasore District. It is located at a distance of 194 km from Bhubaneswar, State Capital of Odisha. In accordance to the area, the District is the 2nd largest costal Districts of Odisha. It has 3049 villages covering 12 Blocks, 12 Tahasils and 2 Sub-Divisions. The District is divided into 2 Sub-Divisions namely 1) Balasore, 2) Nilgiri and into 12 Blocks & 12 Tahasils, namely i) Bahanaga ii) Balasore iii) Baliapal iv) Basta v) Bhogarai vi) Jaleswar vii) Khaira viii) Nilgiri, ix) Oupada, x) Remuna xi) Simulia xii) Soro.

Sl. No	Name of the Block/Tahasil	Name of the Sub-Division with Head quarter
1	Sadar	Sub-Division, Balasore
2	Remuna	
3	Bahanaga	
4	Soro	
5	Basta	
6	Baliapal	
7	Jaleswar	
8	Bhograi	
9	Khaira	
10	Simulia	
11	Nilgiri	Sub-Division, Nilgiri
12	Oupada	

The population of the District is 23,17,419 according to the 2011 Census. The District accounts for 5.53% of the State's territory and about 5.50% of State's population. The density of population of the District is 532 per square km as against 610 per square km of the State. As per 2011 census, the population of Scheduled Caste is 1,84,682 (7.30%), and Scheduled Tribe is 14,79,576 (58.7%). The literacy percentage of the District covers 79.18 against 84.67 of the State.

#### MAP SHOWING THE TAHASILS OF BALASORE DISTRICT

#### 1.4 Connectivity facilities: -

The District is well served by a network of good roads and has been called the motorists paradise. The chief roads emanating from Balasore town are NH-16 and NH- 60 pass through the District. Balasore Town is about 60 Kms from Baripada, 122 Kms from Kharagpur, 199 Kms from Jamshedpur, 177 Kms from Cuttack, 199 Kms from Bhubaneswar and 226 Kms from Rourkela. It is also connected with other cities such as Sambalpur, Puri, Bolangir, Bhadrak, Jhargram, Angul, Ranchi and Kolkata via Odisha State Road Transport Corporation and some private travel services. Balasore District is well connected by Rail link to different places. Balasore railway station is an important station on the Howrah-Chennai main line of the South Eastern Railway. The distance to Kolkata is approx. 232 km, while the distance to Bhubaneswar is about 206 km; the city of Balasore is well connected to many places in India like Baripada, Bhubaneswar, Kolkata, Jamshedpur and Cuttack.

## **2. OVERVIEW OF MINING ACTIVITIES IN THE DISTRICT:**

Balasore District has transitional landform features between coastal plain and hilly region. Most of the mineralized area coming under Eco-Sensitive Zone (Kuldiha Wildlife Sanctuary). Thus, mining activities are confined only to the areas outside of Eco-Sensitive Zone. The mining activity in the District is restricted only to Minor Mineral i.e. of sand, road metal, decorative stone and brick clays. These are being given to various user agencies as lease agreement governed and regulated by Revenue Department under the legal provision stated under Odisha Minor Mineral Concession Rules, 2016. There is no lease of Major Mineral in the District. At present Leases of stone, sand and bricks making units are operational in the District. Stone chips, ordinary sand constitute the principal mining activity of Soro, Khaira, Jaleswar, Nilgiri area etc. of Balasore District. Huge granite stone deposits as road metal are available in Khaira, Nilgiri, Soro area and major sand sources having good potential are available in Jaleswar, Remuna and Nilgiri area of the District. These sources have been providing tremendous scope for development of few more Industries based on these Resources.

## **3. GENERAL PROFILE OF THE DISTRICT**

### **a. Geographical Location: -**

Topographically, Balasore district is situated at approximately 20° 48' North to 21° 59' North latitudes and 86°16' to 87°29' East longitudes. It shares boundaries with Mayurbhanj district to the west, Bhadrak to the south, and is bordered by the Bay of Bengal to the east. Two major rivers, the Subarnarekha and Budhabalanga, flow through the region, providing essential water resources that support the district's agricultural activities. The climate in Balasore is tropical, characterized by hot summers, a humid monsoon season, and mild winters, creating a diverse environment for both agriculture and biodiversity.

### **b. Area & Population: -**

Balasore district covers a Geographical area of approximately 3,806 square kilometers from which 332.21 square kilometers falling under Forest area. As of the 2011 census, it had a population of around 2.3 million people. The district has a relatively high population density, reflecting its role as an important agricultural and industrial region within Odisha. Additionally, Balasore has a literacy rate higher than the national average, with a balanced rural and urban population distribution.

### c. Climate:-

Its climate is generally hot with high humidity. May is the hottest month and December is the coolest one. Monsoon generally arrives in the district from 14th of June every year. The average rainfall of the District is 1568.4 mm. The rainfall during June to December constitutes at least 75 Percent of the total rainfall that this District experiences and it has an average of 62 rainy days in the year.

### d. Administrative units: -

Balasore Town is the Administrative Headquarter of Balasore District. It is located at a distance of 194 km from Bhubaneswar, the State capital of Odisha. It is the 2nd largest district in area among the costal districts of Odisha. It has 2952 villages covering 12 Blocks, 12 Tahasils and 2 Sub-Divisions.

Description	Number
No. of Sub-Divisions:	02
No. of Tahasils:	12
No. of Municipalities:	01
No. of N.A.Cs:	03
No. of Blocks:	12
No. of Police Station:	23
No. of Grampanchayat:	289
No. of Inhabited Villages:	2587
No. of Uninhabited Villages:	365
No. of Villages:	2952

The population of the District is 23,17,419 according to the 2011 Census. The District accounts for 5.53% of the State's territory and about 5.50% of State's population. The density of population of the District is 532 per square km as against 610 per square km of the State. As per 2011 Census, the population of Scheduled Caste is 1,84,682 (7.30%), and Scheduled Tribe is 14,79,576 (58.7%). The literacy percentage of the District covers 79.18 against 84.67 of the State.

### LEGEND

- DISTRICT BOUNDARY
- BLOCK BOUNDARY
- BLOCK HEAD QUARTER

e. Connectivity facilities: -

❖ Road Network

The District is well served by a network of good roads and has been called the motorists paradise. The chief roads NH-16 and NH-60 pass through the District. Balasore Town is about 60 Kms from Baripada, 122 Kms from Kharagpur, 199 Kms from Jamshedpur, 177 Kms from Cuttack, 199 Kms from Bhubaneswar and 361 Kms from Rourkela. It is also connected with other cities such as Sambalpur, Puri, Bolangir, Bhadrak, Jhargram, Angul, Ranchi and Kolkata via road.

❖ Rail Network

Balasore District is well connected by Rail link to different places. Balasore Railway Station is a busy station on the Howrah-Chennai main line of the South Eastern Railway. The distance to Kolkata is approximately 232 km, while the distance to Bhubaneswar is about 206 km; the city of Balasore is well connected to many places in India like Baripada, Bhubaneswar, Kolkata, Jamshedpur and Cuttack.

❖ Air Network

At present, Balasore has no connection by Airway. The site selection for Aerodrome is presently under process. The nearest Airport is Biju Patnaik International Airport, Bhubaneswar which is situated 200 Kms far from Balasore. Netaji Subhas Chandra Bose International Airport in Kolkata is 232 kms far from Balasore.

❖ Other:-

The district's coastal location also offers proximity to Dhamra and Paradip ports, facilitating trade for local industries. Communication infrastructure is well-developed, with extensive mobile network coverage from major telecom providers offering 4G & 5G services, along with high-speed internet and fiber-optic options in urban areas. Postal services are comprehensive, with numerous post offices across the district, ensuring mail and courier access even in remote locations. Public transport facilities like bus terminals in key towns, along with local transport options such as auto-rickshaws and limited app-based cab services, make commuting convenient. With its strategic location, Balasore's robust transportation and communication facilities support economic growth, daily commutes, and tourism in the district.

#### f. Industry & Mining: -

Balasore district has a diverse industrial and mining landscape, contributing significantly to Odisha's economy. The district's industrial sector includes small and medium-scale industries like rice mills, cashew processing units, and fish processing plants, which support the agricultural backbone of the region. Additionally, Balasore is home to Balasore Alloys, a significant industrial player in the production of ferro-alloys, particularly in manufacturing high-carbon ferrochrome, which is essential for steel production.

The district's strategic location and proximity to the Bay of Bengal also support a growing marine and seafood processing industry, which exports products both domestically and internationally. Balasore has developed an industrial belt, particularly in areas around Balasore town, and hosts several industrial estates that cater to manufacturing, logistics, and engineering services. In terms of mining, Balasore has limited mineral resources compared to some other districts in Odisha. However, sand and stone quarries are present in certain areas, providing raw materials for construction and local infrastructure projects. Additionally, the district's rivers, such as the Subarnarekha, contribute to small-scale sand mining activities, though this is often regulated due to environmental concerns. The presence of the Integrated Test Range (ITR) at Chandipur also adds strategic value to Balasore's industrial landscape, supporting defense research and testing activities that indirectly contribute to the local economy by attracting auxiliary industries and services. Balasore's industrial and mining activities collectively bolster the local economy, providing employment and promoting economic growth in the region.

#### g. Tourist Places: -

Balasore district is home to a variety of tourist attractions, including scenic beaches, historic temples, and nature spots that attract visitors year-round. Here are some popular tourist places in Balasore:

##### ❖ Chandipur Beach: -

Known for its unique phenomenon where the sea recedes up to 5 km during low tide, Chandipur Beach is a major tourist attraction. Visitors can walk on the seabed, observe marine life, and enjoy beautiful sunsets. The calm environment and distinct tidal behavior make it one of Odisha's most unusual beaches.

#### ❖ Khirochora Gopinath Temple, Remuna: -

This 13th-century temple dedicated to Lord Krishna (Gopinath) is a revered pilgrimage site. Known for its spiritual atmosphere, the temple offers visitors "khira" (a type of sweetened condensed milk) as prasad, which adds to its cultural significance.

#### ❖ Panchalingeshwar Temple

Located on a hilltop amidst lush greenery, Panchalingeshwar Temple is dedicated to Lord Shiva. The temple has five Shiva lingams submerged in a small stream, which visitors touch by feeling under the water. The scenic location, along with the serene atmosphere, makes it a popular destination for nature lovers and devotees alike.

#### ❖ Talsari Beach

Situated near the Odisha-West Bengal border, Talsari Beach is a tranquil spot known for its palm-lined shores and scenic beauty. The beach is ideal for those seeking peace and solitude and offers breathtaking sunrise and sunset views.

#### ❖ Devkund Waterfall

Located within the Similipal Biosphere, Devkund Waterfall is a hidden gem surrounded by dense forests. The trek to the waterfall takes visitors through lush greenery and diverse wildlife, making it an ideal destination for nature enthusiasts and trekkers.

#### ❖ Nilgiri

The town of Nilgiri houses the historic Nilgiri Palace, which belonged to the Nilgiri royal family. Nearby, the Jagannath Temple in Nilgiri is another popular religious site. The area is known for its scenic beauty, temples, and heritage structures.

#### ❖ Kuldiha Wildlife Sanctuary

This sanctuary is a haven for wildlife enthusiasts, offering sightings of animals like elephants, leopards, and various bird species. Kuldiha is part of the larger Similipal Biosphere, and it features rich biodiversity, making it a popular destination for safaris and nature walks.

#### ❖ Bichitrapur Mangrove Forest

Located near the coast, this mangrove forest offers boat rides through dense mangrove trees and a chance to explore a unique ecosystem. It's an excellent spot for bird-watching, with migratory and native birds commonly seen in the area.

#### ❖ Chandaneswar Temple

Close to Talsari Beach, Chandaneswar Temple is an ancient temple dedicated to Lord Shiva. It is particularly popular during the annual Maha Vishuva Sankranti festival, attracting thousands

of devotees from Odisha and neighboring West Bengal.

#### ❖ Kasafal Beach

Another relatively unexplored beach, Kasafal Beach is known for its serene environment and is an ideal spot for a quiet, undisturbed day by the sea. This beach is popular with locals and a growing number of tourists looking to avoid the crowds.

#### ❖ Integrated Test Range (ITR), Chandipur

Although entry is restricted for security reasons, the ITR at Chandipur is one of India's key missile testing sites. Visitors often visit Chandipur Beach nearby, from where glimpses of missile launches are sometimes visible, making it an interesting stop for those curious about India's defence technology.

#### h. Health: -

Balasore district has a range of healthcare facilities providing medical services to its urban and rural population. The primary healthcare provider is the District Headquarters Hospital (DHH) in Balasore town, a government-run facility that offers a range of healthcare services, including emergency care, maternity and child care, surgery, and specialist consultations. The DHH is equipped with diagnostic tools like X-ray and ultrasound machines, as well as an intensive care unit (ICU) and emergency facilities, catering to both local residents and patients from nearby regions. In addition to the DHH, Balasore has a network of Community Health Centers (CHCs), Primary Health Centers (PHCs), and Sub-Centers spread across its rural areas. These centers offer basic healthcare services, immunization, maternal and child health services, and support for disease control programs. The government also provides mobile health units to serve remote villages, ensuring healthcare access in rural parts of the district. Balasore district is also home to several private hospitals, nursing homes, and clinics that complement public healthcare services. These private facilities offer specialized services, including gynecology, pediatrics, orthopedics, and dental care, making healthcare more accessible for residents. For emergency cases, the 108 ambulance service operates across the district, providing timely medical assistance and transport to hospitals. Additionally, Balasore has a growing number of diagnostic centers and pharmacies that offer essential healthcare support, with modern diagnostics, pathology labs, and 24-hour medical stores. The district also emphasizes public health programs, including regular health camps, awareness campaigns, and preventive healthcare initiatives run by the Odisha Health Department, which focus on issues like tuberculosis, malaria, maternal health, and nutrition. These combined efforts contribute to a steadily improving healthcare landscape in Balasore, offering a range of services to meet the needs of its population.

## i. Economy

Balasore District is one of the economically strong District in Odisha, which is privileged in both agriculture and industry. In spite of being an agrarian economy, agriculture is the main stay of the people of Balasore. The District lies in the coastal part of Odisha and is blessed with hot and humid climate with alluvium soil and intersected by the perennial rivers, which collectively provides conducive infrastructure for the growth of agriculture in this region. In the recent years, the utilization of the wasteland for ensuring the economic development of Balasore District has been taken into consideration and it is being used for the production of coconut and betel. The local economy of Balasore District largely depends on the cultivation of paddy and wheat. Industries, Agriculture, Fishing and Tourism are the four major revenue sources of Balasore District. Birla Tyres, Balasore Alloys Limited, Emami Paper Mills Limited and Polar Pharma India Limited are some of the large-scale industries functioning in this district.

Figure 1.4a : Index Map of Balasore District, Odisha

## 4. GEOLOGY OF THE DISTRICT:

The coastal tract of Orissa is underlain by the Tertiary and Quaternary Formations. Balasore is a unique District in Odisha with varied Geology, of these the Tertiaries are least exposed on the surface, whereas the Quaternaries are extensively developed along the coast and further inland. The Quaternary Formations cover almost the entire study area while the Tertiaries are exposed near Baripada town at about 28 km. NNW of the Northern boundary of the area. The Pre- Cambrian crystalline occur as hills and mounds in the west just outside the present area. Chatterji and Raghava Rao (1960) made studies on the sub-surface geology and tectonic framework of sedimentation in the crescentic coastline of Balasore on the basis of the data obtained from the exploratory drilling operations. Exploratory drilling reveals that in the subsurface the warped Pre-Cambrian basement is overlain by Miocene marine sediments, Mio-Pliocene estuarine sediments, laterites and alluvium. The Mio-Pliocene sediments and alluvial sections contain the principal ground water reservoirs. The marine sediments are dominantly composed of finer elastics and non-clastics (Bhatnagar et al, 1970). Small outcrops of ultramafic rocks are exposed in and around Bhalukasoni (21°29': 86°42') area under Nilgiri subdivision of Balasore District. Ultramafic rocks comprising serpentinised dunite, peridotite and pyroxenite largely under soil and laterite cover occur intermittently spreading over an area of 1.8m × 800m. A 100m long E-W trench has exposed two chromite ore bodies on its either end, the dimensions being 500m × 3.5m × 4.5m and 5.5m × 2m × 3.3m. A reserve of the order of 1550 tonnes was estimated with massive and spotted type of chromite with Cr<sub>2</sub>O<sub>3</sub> content ranging from 25.77 to 54.76%. These chromite occurrences along with the associated ultramafic rocks are considered to be xenolithic bodies lying within a plutonic mass of gabbroic rocks.

### 4.1. Physiography & Geomorphology:

#### Physiography:

The District of Balasore is having unique physiographic setup. It is bounded by the Bay of Bengal in its southern part and in the north western part it is marked by a set of hillocks and mounds including a north east – south west trending Hilly patch in the Nilgiri, Khaira, Soro & Oupada Blocks. The land elevation varies from as low as near mean sea level in the southern part to as high as about 600 m above mean sea level in the north western part. In between a major part covering more than 75% of the geographical area is having elevation within the range of 2 – 10 meters above mean sea level. In the extreme eastern part of the District, within the alluvial tracts of the River Subarnarekha & Budhabalanga, the average elevation is within 1 – 2 meters above mean sea level.

### Geomorphology:

Hydrogeomorphological features of Balasore District are mainly attributed to fluvio-marine, erosional, denudational and depositional processes. The coastal plain has been developed due to fluvio-marine processes. The alluvial plains owe their origin due to various fluvial actions of major rivers. The details of the geomorphic unit as identified are as below:

#### ❖ Coastal Plain:

Coastal plain predominantly consists of sand silt and clay and is developed all along the coast of Balasore District. It is developed all along the coast of Balasore District. It is a gently sloping plain occurring parallel to the coast. The saline marshy tract with shrubby vegetation comes under this coastal plain. Tidal streams are very active during high tide time. Groundwater prospect is good but salinity is a major problem in this tract.

#### ❖ Beach:

Beach is mainly formed by marine action. Beach ridges are very common and these are formed due to sea waves. They are mainly consisting of sand mixed with silt etc. Groundwater prospect is good within a depth of 30-40 m, where fresh groundwater pockets are available. Deep tube wells in these areas may lead to seawater ingress.

❖ **Mud flat:**

This is a relatively marshy area covered with fine silt and mud along the shore. Mangroves vegetation is very common. Ground water quality is mostly saline.

❖ **Paleo mud flat:**

These are the ancient mud flat consisting of fine sand and mud. These are mostly converted to agricultural land in due course of time. Due to marine regression ground water quality is saline.

## 4.2. Stratigraphy:

The major parts of the district are underlain by Tertiary & Quaternary Alluvium (including Recent Alluvium). The north western part is underlain by the Archaeo-Proterozoic Basement Granites and Granite Gneisses with minor Pegmatites and vein Quartz.

The recent alluvium occurs in limited patches along the river courses. The Tertiary deposits comprise of lower marine fossiliferous sequence of Miocene age and an upper estuarine sequence of Mio-Pliocene age. The generalized stratigraphic sequence of Balasore district is given below.

Holocene: Sand dune, newer alluvium Older alluvium Laterite

Quaternary: Recent to sub-Recent Laterites and lateritic gravels

~~~~~ Unconformity ~~~~~

Tertiary: Mio Pliocene Brown, yellowish and grey sand, gravel and clays, gritty sandstones.

Miocene: Grey Clays, sand, Lime stones with molluscan shells

~~~~~ Unconformity ~~~~~

Archaean to Proterozoic: Associated intrusives, Nilgiri Granites, Quartzite and phyllite, amphibolites, unclassified gneisses.

### 4.3. Mineral Resources:

Minerals like soft stones, limestone, stone chips are available in the District, which are mainly used in industrial units in the District. The huge deposits of granite stones at Nilgiri, Khaira, Soro area which provides tremendous scope for development of few more industries based on these resources. Except these, no minerals in large quantity which can be explored for commercial purpose found in the District.

### 5. DRAINAGE AND IRRIGATION PATTERN:

The District has considerable flat land, which provide suitable site for agricultural use. The hilly areas are mostly under forest with patches of cultivation on scarp areas. Major rivers flowing in the District are Budhabalanga, Subaranrekha, jambhira, sona. Major crops grown in the District are rice, Only, 12.21 percent area of agricultural use are net irrigated and major source of irrigations are well and tube wells. Details of the river system is narrated below.

## DRAINAGE SYSTEM WITH DESCRIPTION OF MAIN RIVERS

| Sl. No | Name of the River  | Place of Origin                | Altitude of Origin (Approx.) | Total Length in Balasore District (Km) | Area Drained in District (Sq. Km) | % of District Area Drained | Process of Deposition of Sediments   |
|--------|--------------------|--------------------------------|------------------------------|--|-----------------------------------|----------------------------|--|
| 1      | Budhabalanga River | Similipal Hills, Mayurbhanj    | ~900 m                       | ~110 km                                | ~2,500                            | ~66%                       | Formation of wide flood plains; deposition of sand, silt and clay during monsoon floods    |
| 2      | Subarnarekha River | Chotanagpur Plateau, Jharkhand | ~600 m                       | ~80 km                                 | ~900                              | ~24%                       | Lateral erosion with sand bar and point bar formation; deposition of coarse to medium sand |
| 3      | Jambhira River     | Similipal foothills            | ~500 m                       | ~60 km                                 | ~300                              | ~8%                        | Fine silt and clay deposition in valley plains and low-lying agricultural fields           |
| 4      | Sona River         | Similipal hill ranges          | ~700 m                       | ~40 km                                 | ~100                              | ~2%                        | Seasonal sandy alluvium deposition; minor channel shifting during heavy rainfall           |

### River & drainage in Balasore District Map:

## 5.1. River System

The Budhabalanga River (also referred to as the Balanga River) is the principal river of Balasore District and constitutes the primary surface drainage system of the study area. The river originates from the Similipal Hills and descends through the renowned Barehipani Falls, located within Similipal National Park.

The river flows generally from northwest to southeast, maintaining its original easterly course across the plains. Geomorphologically, it is classified as an extended consequent river, having preserved its initial flow direction and attained a mature stage of valley development in its lower reaches.

The Budhabalanga basin covers a total drainage area of approximately 4,847 sq. km, with an estimated annual water yield of about 637 million cubic metres (Mm<sup>3</sup>). During the pre-monsoon season, the river flow remains relatively low and sluggish. However, with the onset of the southwest monsoon, the discharge increases considerably, frequently leading to overbank flooding of adjacent low-lying areas and extensive alluvial deposition across the floodplains.

### Major Tributaries

The Budhabalanga River and its tributaries drain the region almost throughout the year. The important tributaries include:

- ❖ Sona River – Flows predominantly from west to east before joining the Budhabalanga downstream.
- ❖ Amrutia River – Flows from NNW to SSE direction prior to its confluence with the main river.
- ❖ Gangahar River – A minor but perennial tributary contributing to the basin drainage.

These tributaries join the Budhabalanga downstream of the study area near Sahupada and Bhimda (outside the present area).

The Sona River receives discharge through Sankh Nalah from the Balgopalpur Industrial Estate before joining the Budhabalanga. The Amrutia River carries wastewater loads from nearby industrial establishments, particularly during the rainy season when runoff from dumping sites increases.

In addition, a local stream flowing from southwest to northeast drains the industrial areas around Chhanpur and Ganeshwarpur Industrial Estate before ultimately joining the Budhabalanga near Nuabazar in Balasore town.

## Hydrological Characteristics

- ❖ **Drainage Pattern:** Predominantly dendritic, governed by regional slope and lithological controls.
- ❖ **Flow Regime:** Perennial in nature with pronounced seasonal variation in discharge.
- ❖ **Sedimentation:** Deposition of sand, silt, and clay in lower reaches leading to the formation of fertile alluvial floodplains.
- ❖ **Flood Behaviour:** Frequent overbank flooding during periods of intense monsoonal rainfall.

In conclusion, the Budhabalanga river system forms the backbone of the surface drainage network of Balasore District and plays a crucial role in regional hydrology, agriculture, groundwater recharge, sediment transport, and geomorphological development.

## 6. LAND UTILIZATION PATTERN IN THE DISTRICT

### 6.1. Forest & Non-forest Land

The forests of Balasore District contain a wide variety of medicinal plants, kendu leaves, bamboo, Sal, teak, and other timber species along with diverse fauna. The district hosts the Kuldiha Wildlife Sanctuary, covering an area of 26,886.23 hectares. Major wildlife species found in the sanctuary include Elephant, Bear, Nilgai, Sambar, Peacock, Wild Boar, Deer, and several species of reptiles and birds.

#### 6.1.1 Category-wise Forest Area in Balasore Division

*(Based on records of the Divisional Forest Officer, Balasore Division)*

| Category of Forest          | Number of Blocks | Area (Ha)        | Percentage (%) |
|-----------------------------|------------------|------------------|----------------|
| Reserved Forest             | 9                | 20,570.16        | 43.36          |
| Proposed Reserved Forest    | 13               | 2,153.51         | 4.54           |
| Demarcated Protected Forest | 22               | 2,264.951        | 4.77           |
| Village Forest              | 50               | 321.196          | 0.67           |
| Protected Forest            | 1                | 7.403            | 0.015          |
| DLC Forest                  |                  | 11,335.00        | 23.89          |
| Revenue Forest              |                  | 10,779.32        | 22.72          |
| <b>Total Forest Area</b>    |                  | <b>47,431.54</b> | <b>100</b>     |

N.B:- Out of 9 Reserve Forest, 3 nos. Reserve Forest namely Kuldiha, Tenda & Devgiri and out 50 nos. of village forest blocks, 8 nos, have been included in Kuldiha Wildlife Sanctuary notified under Sec. 18 of Wildlife (Protection) Act, 1972 vide Govt. of Odisha notification no. 243/FFAH , dt. 04.01.1984.

## 6.1.2 Block-wise Land Utilization Pattern in Balasore District

(Figures in Hectares – Approximate Distribution Based on District Land Records)

| Sl. No. | Year / Block / ULB   | Forest | Land put to Non-Agrl. Use | Barren & Non-Cultivable land | Permanent Pastures & other grazing land | Land under misc.tree, crop & groves not included net area sown | Cultivable Waste | Old Fallows | Current Fallows | Net Area sown | Total Area under Survey |
|---------|----------------------|--------|---------------------------|------------------------------|---|--|------------------|-------------|-----------------|---------------|-------------------------|
| 1       | 2                    | 3      | 4                         | 5                            | 6                                       | 7  | 8                | 9           | 10              | 11            | 12                      |
|         | <b>2020-21</b>       | 3139   | 69892                     | 3251                         | 15737                                   | 11003  | 22587            | 11674       | 19592           | 192744        | 349619                  |
|         | <b>2021-22</b>       | 3190   | 65226                     | 505                          | 15735                                   | 10341  | 28379            | 13861       | 18035           | 194276        | 349548                  |

Source: Directorate of Economics and Statistics, Odisha

The district is characterized by predominantly flat terrain suitable for agriculture, while hilly areas (particularly Nilgiri and Oupada) remain under forest cover with limited cultivation on slopes. Major crops include rice and pulses. Approximately 12.50% of the net cultivated area is irrigated, mainly through wells and tube wells.

## 6.2 Agriculture Land:

The primary objective of Agriculture Department is to increase the production as well as productivity of major crops like Paddy, Groundnut, Mustard, Mung, Biri & vegetables which is widely cultivated in this District in both Kharif & Rabi season. Another key objective is to bring all round development among farming community of the District. The Chief District Agriculture officer is the head of office so far as agriculture is concerned. Under him there are 5 District Agriculture Officers & the block under them. As it has already been pointed out that agriculture is the main livelihood of the people in Balasore District, it is therefore designated

as the food bowl of Odisha. Rice is the principal crop grown in this District, followed by other cereals, pulses, oilseeds, vegetables, spices and sugarcane.

The agricultural statistics for the District is shown in tables below:

| <b>CROP COVERAGE AREA OF BALASORE DISTRICT, ODISHA (2022-23)</b> |                         |                          |                       |                          |                         |                                |                                |

### 6.3 Horticulture Land:

The primary objective of Horticulture Department is to increase of production as well as productivity of major fruits like Mango, Guava, Citrus etc., which is widely covered in the District. Another key objective is the all-round development of the farming community of the District.

## 7. SURFACE WATER AND GROUND WATER SCENARIO OF THE DISTRICT

### 7.1 Hydrogeology

**Distribution of Saline / fresh water aquifers:** The occurrence of fresh water aquifers in coastal tract of Balasore restricted by two important factors- (i) Occurrence of hard rocks in the western side and (ii) Salinity hazard problems in the eastern part. In the narrow tract, close to the coast line extending right from Chandaneswar in the North to Bahanga/ Simulia in the south in the District, salinity problem occurs where both the saline water bearing and fresh water bearing aquifers occurs at different depths. The depth of occurrence of saline water bearing aquifers is not uniform along the entire tract. The study of lithological logs and electrical logs of boreholes and results of zone tests etc. indicate occurrence of saline water either above or below fresh water bearing aquifers and also both above and below the fresh water aquifers.

The width of the coastal saline tract is generally ranging from 4 to 5 km running from Bahanaga to Baliapal Block near Subranarekha river, it encroaches inland ward towards north east. Further its width increases to a range from 5 to 10 km in Bhograi Block. General the top aquifers up to 150 m are saline in this District. However, during the detailed studies in the area, it is observed that up to the depth range of 25 to 30m, fresh aquifers are occurring having a thickness of 5 to 15m, which are tapped by shallow tube wells, below 150m the aquifers are fresh up to 220m and 250m below the ground level the aquifers are saline. The salinity hazards occur in a narrow tract along the eastern margin adjoining the sea coast and in the rest part of coastal alluvium fresh water occurs all through down to the bed rock.

**Non-saline area:** The depth of the bore holes varied from 103m to 330 and the depth of the tube wells varied from 96 to 208m. The bed rocks were encountered at Hanspatna (110m) and at Soro (295m). In the Jaleswar-Basta-Baliapal-Remuna-Balasore tract a group of aquifers usually varies in thickness from 3 to 15m, attains a maximum cumulative thickness of around 40 to 50m. The yield varies from 20 to 66 Ips against the drawdown of pumping water level varying between 5.83 to 15 60m. The static water levels vary from 2.13 to 10.68m bgl. The discharge in general is less in the southern part of this tract. In the area around Soro and Markona a group of aquifers consisting fine to coarse sands which generally occur below 46m depth attains a cumulative thickness of about 125m and the thickness of aquifers dwindles towards west. The discharge is generally low and varies between 11 to 24 Ips against the draw down more than 15m.

In and around Gopalpur of Bahanaga block aquifers are thin and mixed with finer materials and are low yielding. Also, in Kasbajaypur-Bahanga area the formation is predominantly argillaceous in nature and sand horizon are lesser. The yield generally varies between 20 to 30 lps against the draw down around 20m. In this area auto flowing condition occurs from deeper aquifer blow 200m depths at Saud. In general in the northern part (north of Balasore town) thickness of aquifers as well as yield is more in comparison to southern part of the District (south of Balasore town).

## 7.2. Depth of water level:

### ❖ Categorization of depth to water level of pre-monsoon period (Apr-2015)

| No. of wells measured | Depth to water level (m bgl) |      | 0-2 (m) |   | 2-5 (m) |   | 5-10 (m) |    | 10-20(m) |     |
|-----------------------|------------------------------|------|---------|---|---------|---|----------|----|----------|-----|
|                       | Min                          | Max  | No.     | % | No.     | % | No.      | %  | No.      | %   |
| 25                    | 2.41                         | 7.81 | 0       |   | 2       | 8 | 23       | 92 | 0        | --- |

Depth to ground water levels during the post monsoon period (April 2015) varied between 2.41 and 7.81 m bgl Categorization of depth to water level of post monsoon period (November 2015) for HNS in Balasore District is presented below in table.

### ❖ Categorization of depth to water level of pre-monsoon period (Nov-2015)

| No. of wells measured | Depth to water level (m bgl) |      | 0-2 (m) |    | 2-5 (m) |      | 5-10 (m) |     | 10- 20(m) |   |
|-----------------------|------------------------------|------|---------|----|---------|------|----------|-----|-----------|---|
|                       | Min                          | Max  | No.     | %  | No.     | %    | No.      | %   | No.       | % |
| 34                    | 1.08                         | 5.18 | 6       | 17 | 27      | 79.4 | 1        | 2.9 | 0         |   |

## 7.3. Ground Water Quality:

For ascertaining ground water quality, water samples were collected from the existing network of National Hydrographs Network Monitoring Stations [Aquifer – I(Phreatic)] and also from the Tube wells [Aquifer II & III] during the pre-monsoon season and analyzed in the Regional Chemical Laboratory using the Standard Analytical Protocols of APHA. In addition to this, a number of chemical data of Rural Water Supply & Sanitation of Department of Rural Development, Govt. of Odisha, available in website of the Department of Drinking Water Supply, Govt. of Odisha too was collected and collated. These data were used to interpret the chemical characteristics of the Aquifer(s) concerned. In general, it was found that

the Water Quality of the Phreatic Aquifer are potable and conforms to the BIS: 10500 standards for drinking water.

The chemical concentration of these constituents is presented in Table.

**Summarized Chemical Quality of the Phreatic Aquifer (Aquifer-I)**

| PARAMETER                                   | UNIT          | Minimum | Maximum | Average |
|---|---------------|---------|---------|---------|
| pH  |               | 7.50    | 8.30    | 8.05    |
| Electrical Conductivity(EC)                 | μS/cm at 25°C | 250.00  | 850.00  | 390.91  |
| Total Dissolved Solids(TDS)                 | mg/L          | 121.00  | 474.00  | 198.45  |
| Total Hardness(TH) as CaCO <sub>3</sub>     | mg/L          | 80.00   | 165.00  | 123.64  |
| Total Alkalinity(TA)                        | mg/L          | 80.00   | 325.00  | 139.09  |
| Calcium(Ca <sup>++</sup> )                  | mg/L          | 20.00   | 54.00   | 33.09   |
| Magnesium(Mg <sup>++</sup> )                | mg/L          | 1.00    | 21.00   | 9.95    |
| Sodium(Na <sup>+</sup> )                    | mg/L          | 8.00    | 150.00  | 29.73   |
| Potassium(K <sup>+</sup> )                  | mg/L          | 0.00    | 1.00    | 0.05    |
| Carbonate(CO <sub>3</sub> <sup>--</sup> )   | mg/L          | 0.00    | 0.00    | 0.00    |
| Bicarbonate(HCO <sub>3</sub> <sup>-</sup> ) | mg/L          | 98.00   | 397.00  | 169.68  |
| Chloride(Cl <sup>-</sup> )                  | mg/L          | 14.00   | 46.00   | 26.68   |
| Sulphate(SO <sub>4</sub> <sup>-</sup> )     | mg/L          | 2.00    | 39.00   | 13.95   |
| Fluoride(F <sup>-</sup> )                   | mg/L          | 0.20    | 1.00    | 0.56    |

**Summarized Chemical Quality of the Exploratory Wells (Aquifer II & III)**

| PARAMETER                                   | UNIT          | Minimum | Maximum | Average |
|---|---------------|---------|---------|---------|
| pH  |               | 6.96    | 8.42    | 7.86    |
| Electrical Conductivity(EC)                 | μS/cm at 25°C | 170.00  | 1680.00 | 713.25  |
| Total Dissolved Solids(TDS)                 | mg/L          | 93.00   | 901.00  | 368.26  |

| Bicarbonate(HCO <sub>3</sub> <sup>-</sup> ) | mg/L          | 18      | 506     | 211     |
| Chloride(Cl <sup>-</sup> )                  | mg/L          | 7       | 5707    | 80.1    |
| Sulphate(SO <sub>4</sub> <sup>-</sup> )     | mg/L          | 0       | 189     | 10.3    |
| Fluoride(F <sup>-</sup> )                   | mg/L          | 0.07    | 1.67    | 0.65    |

#### 7.4. Ground Water Development:

Groundwater constitutes the principal source of drinking water supply in the rural areas of Balasore District. Groundwater development is primarily undertaken through dug wells and hand pumps.

In general, dug wells constructed in the district are about 2 meters in diameter, with depths ranging from 8 to 15 meters depending upon the thickness of the weathered zone. These wells tap the shallow phreatic aquifer occurring within the weathered formation and the uppermost fractured portion of the basement rock. A large number of privately owned dug wells are also used for domestic purposes; however, reliable data regarding their exact numbers is not available.

Over the years, Mark II and Mark III hand pumps have been installed extensively for groundwater extraction. These hand pumps offer the following advantages:

1. They are less susceptible to contamination from surface sources.
2. They tap fracture zones at depths ranging between 20 and 60 metres, which are comparatively less affected by seasonal water level fluctuations, thereby reducing the likelihood of failure during peak summer months.

In rural areas of Balasore District, a total of 12,311 hand pumps have been installed by the Public Health Engineering Department (PHED), of which 9,342 are currently functional. Additionally, 574 dug wells constructed by various government departments are under regular use.

In urban areas, groundwater plays a supplementary role in water supply, with the primary supply being sourced from dams, reservoirs, and weirs constructed across rivers and streams. However, no authenticated data is presently available regarding the total number of groundwater abstraction structures serving urban water supply.

As per the latest groundwater resource estimation carried out using the GEC-97 methodology, the overall stage of groundwater development in Balasore District is approximately 41%, indicating substantial scope for future groundwater development. The ground water resources of Balasore District is given in the table:

| <b>Ground Water Resources of Balasore District (As per GEC-97 Assessment)</b> |                       |
|---|-----------------------|
| <b>Particulars</b>  | <b>Quantity (MCM)</b> |
| Net Annual Ground Water Availability  | 1,180                 |
| Existing Gross Ground Water Draft – Irrigation                                | 390                   |

|   |      |
|---|------|
| Existing Gross Ground Water Draft – Domestic & Industrial       | 94   |
| Total Existing Gross Ground Water Draft                         | 484  |
| Allocation for Domestic & Industrial Requirement (Future)       | 110  |
| Net Ground Water Availability for Future Irrigation Development | 586  |
| Stage of Ground Water Development (%)                           | 41%  |
| Category of Block   | Safe |

Note: MCM – Million Cubic Meters

The district falls under the “Safe” category with respect to groundwater exploitation, suggesting that further development may be undertaken with proper planning and sustainable management practices.

### 7.5. Ground Water Related Issue and Problems:

#### Some of key ground water related issues are

- i. Locating suitable sites for bore wells
- ii. Suitable design of dug wells and hand pumps
- iii. Taking up artificial recharge projects to augment the resource availability in Balasore District.
- iv. Optimal development of irrigation potential by developing ground water available for future uses.
- v. Creating public awareness for conserving ground water through awareness camps, NGO’s and mass media.

### 7.6. Mass Awareness Campaign (MAP) & Water Management Training Programme (WMTP) by CGWB

There was no Mass Awareness & Training Activity in the district of Balasore.

### 7.7. Area Notified by CGWB/SGWA

The stage of Groundwater development is well within Safe Category and there is no over exploitation and major threat of Groundwater pollution and depletion. Hence no area has been notified by CGWA.

### 7.8. RECOMMENDATIONS

1. As the District suffers from water scarcity, it is recommended to take artificial recharge at suitable locales. On the basis of the hydrogeological criteria such as post monsoon water level below 7 m bgl indicating availability of sufficient space in the unsaturated zone to

retain additional water and availability of surplus surface runoff, 250 Sq kms area in Balasore District has been demarcated as suitable for artificial recharge. Through this 41.25 mcm water can be recharged. In the hard rock areas, pin pointing suitable sites for bore wells is always a challenge.

2. Considering the anisotropy in distribution of fractures at deeper level, suitable sites may be selected using remote sensing techniques in association with geophysical and hydro-geological investigations.

3. For deriving optimal benefit from aquifers in areas under fissured formation, the dug wells should be designed to penetrate the weathered zone as well as top part (1-2 m) of the underlying bed rock, so as to get the full benefit, from the total thickness of the shallow aquifer.

4. For hand pumps and shallow tube wells the casing provided against the weathered zone should be slotted at the bottom so that the well can extract shallow ground water also. In urban areas use of shallow aquifers should be encouraged.

5. The surface run off in urban areas and its peripheral parts should be harnessed to augment the ground water resource through appropriate recharge techniques.

6. For urban areas roof top rain water harvesting and artificial recharge is most suitable. Location and design of the structures should be guided by findings from hydrogeological and geophysical surveys.

7. Sites for artificial recharge should be taken up at places where sufficient thickness of weathered zone as well as fracture/fracture zones is available.

8. The depth of the recharge well should be governed by the depth of occurrence of the fractures.

## **8. RAINFALL OF THE DISTRICT AND CLIMATE CONDITION**

Balasore District experiences a tropical monsoon climate characterized by hot summers, high humidity, and moderate winters. The district is generally hot and humid during the months of April and May, while December and January remain comparatively cold. The southwest monsoon generally sets in by late June or early July and continues until the end of October. The district receives the majority of its annual rainfall during this period. Occasional cyclonic storms and depressions from the Bay of Bengal also contribute significantly to rainfall. The temperature during summer may rise up to 45°C, whereas during peak winter, it may fall to 7–8°C. Relative humidity remains high during the monsoon season due to its coastal proximity.

| Annual Rainfall Data (2019–2025) |                      |         |
|----------------------------------|----------------------|---------|
| Year                             | Annual Rainfall (mm) | Remarks |
| 2020                             | 1,538.18             |         |
| 2021                             | 1,682.36             |         |
| 2022                             | 1,482.76             |         |
| 2023                             | 1,471.91             |         |
| 2024                             | 1,367.09             |         |
| 2025                             | 1,723.07             |         |

**Average Annual Rainfall (2019–2024): ~1,566 mm**

### Climatic Highlights (Balasore District)

- ❖ Climate Type: Tropical Monsoon
- ❖ Peak Summer Temperature: Up to 45°C (April–May)
- ❖ Peak Winter Temperature: 7–8°C (December–January)
- ❖ Rainfall Concentration: June/July to October
- ❖ Humidity: High during monsoon season (70–90%)

The rainfall pattern shows moderate inter-annual variability, largely influenced by monsoon performance and cyclonic activity along the Odisha coast.

## 8.1. Month wise rainfall:

As per the Indian Meteorological Department (IMD), Bhubaneswar (Letter No. BBS/RMC/CS-312 dated 18 January 2016), the normal period of the South-West Monsoon over Odisha extends from 10th June to 15th October. The district receives the bulk of its annual rainfall during this monsoon period.

The month-wise rainfall data for the years 2023, 2024, and 2025 (as reported by the District Emergency Operation Centre, Balasore) is presented below:

| Month-wise Rainfall (in mm) |              |                 |                 |                 |                 |
|-----------------------------|--------------|-----------------|-----------------|-----------------|-----------------|
| Sl. No                      | Month        | 2023 (mm)       | 2024 (mm)       | 2025 (mm)       | Average (mm)    |
| 1                           | January      | 0.00            | 20.5            | 0.00            | 6.83            |
| 2                           | February     | 0.25            | 6.33            | 31.17           | 12.58           |
| 3                           | March        | 92.43           | 102.10          | 36.50           | 77.01           |
| 4                           | April        | 87.11           | 2.58            | 97.42           | 62.37           |
| 5                           | May          | 50.84           | 100.10          | 142.30          | 97.75           |
| 6                           | June         | 169.75          | 121.10          | 295.66          | 195.50          |

### Interpretation

- ❖ Maximum rainfall is observed during July and August, coinciding with peak monsoon activity.
- ❖ Pre-monsoon showers occur during April and May due to convectional activity and occasional cyclonic systems.
- ❖ Rainfall sharply decreases after mid-October following monsoon withdrawal.
- ❖ The average annual rainfall over the three-year period is approximately 1,605 mm, indicating near-normal monsoon conditions overall.

## 8.2. Climate:

The climate in Balasore is warm and temperate. In winter, there is much less rainfall in Balasore than in summer. The Koppen-Geiger climate classification is Cwa. The average temperature in Balasore is 24.7 °C.

#### 14. TOTAL MINERAL RESERVE AVAILABLE IN THE DISTRICT:

Total mineral resource of road metal/Building stone is estimated as 4081304.5cum which will produce over 130.624 hectare of land and may increase after detail investigation as per details below.

- i. Blocks were identified based on geological studies through field observation.
- ii. Mineable resource was calculated by considering detail prospecting.
- iii. Area calculated as per DGPS enabled Drone survey information obtained from individual source. Land detail needs to be verified from revenue record.
- iv. To meet the requirement of minerals, more such blocks need to be identified and the data should be updated periodically, after certain intervals to update the data bank of DSR.

| SI No. | Name of the mineral                                | Area of the lease in AC | Geological Resource in CUM | Minable Reserve in CUM | Method used for Resource Estimation                            |

## 15. QUALITY / GRADE OF MINERAL AVAILABLE IN THE DISTRICT:

### **Rocks and Minerals found in Balasore District: -**

Road metal/Building stone of the District are very much suitable for various construction purposes after crushing and screening. The granite gneisses are well foliated, jointed and weathered easily. Generally, the depth of weathering extends down to a depth of 15 meters with in exceptional cases e.g. at Nilgiri, Khaira, Oupada etc. it was 42.5 m bgl. This weathered zone forms the main repository of ground water in hard rock areas and is tapped by dug wells. The yield of dug wells ranges from 6 to 10 m<sup>3</sup>/ day. As the area has undergone several phases of tectonic deformations deep-seated fractures are developed which form a conduit for downward percolation of ground water and form aquifers in deeper conditions. These deeper fractures are generally encountered in bore wells. Deeper fractures are tapped by bore wells in Nilgiri, Oupada and Simulia blocks.

## 16. USE OF MINERAL

### **Uses of granitic rocks-**

**Building Stone:** - Granitic rocks have been extensively used as a dimension stone and as flooring tiles in public and commercial buildings and monuments.

**Sub base and base material in road and highway construction:** - Crushed stone is the most basic use of granite. Crushed granite is used as a sub base and base material in road and highway construction. It is used as crushed stone media in sewage system drain fields and as a base material for foundations and construction slabs. Crushed granite in attractive colors is used as a landscape stone and in planters. It also makes great railroad ballast, and in larger sizes it makes good riprap.

**Granite Paving Stone:** - Granite paving stones or "pavers" can make a colorful and interesting way of paving a driveway or patio. The beauty of natural stone combined with expert craftsmanship and design can produce a unique and lasting result. In the past granite blocks were often used to pave city streets.

**Engineering:** - Engineers have traditionally used polished granite surface plates to establish a plane of reference, since they are relatively impervious and inflexible. Sandblasted concrete with a heavy aggregate content has an appearance similar to rough granite, and is often used as a substitute when use of real granite is impractical. Granite block is usually

processed into slabs, which can be cut and shaped by a cutting center. Granite tables are used extensively as bases for optical instruments because of granite's rigidity, high dimensional stability, and excellent vibration characteristics.

**17. DEMAND AND SUPPLY OF THE MINERAL IN THE LAST THREE YEARS:**

As such there are huge infrastructural activities such as road, building, railways are coming up by Govt. of India & PSUs under “Make in India” Programme. The Granitic rocks are the main raw minerals for the above activities and considering the last three years’ actual production of Balasore with respect to the requirement of the state has a huge gap. It is proposed to start the stone production from larger block/area to at least double the production of the District which will enhance the revenue of the District and also support the livelihood of the local people.

**DEMAND FOR VARIOUS DEVELOPMENTAL PROJECTS**

| Mineral Type       | 2022-23 |        | 2023-24 |        | 2024-25 |        |
|--------------------|---------|--------|---------|--------|---------|--------|
|                    | Demand  | Supply | Demand  | Supply | Demand  | Supply |
| Stone / Road Metal | NA      | NA     | NA      | NA     | NA      | NA     |

**18. MAP OF EXISTING MINING LEASES IN THE DISTRICT:**

Attached as Plate-I.

**19. DETAILS OF THE AREA OF WHERE THERE IS A CLUSTER OF MINING LEASE VIZ. NUMBER OF MINING LEASES, LOCATION (LATITUDE AND LONGITUDE)**

Currently there are clusters of mining leases in Balasore District (Enclosed as Annexure-II). However, it is proposed to consider the cluster of mining lease while planning for new lease area in coming years.

**20. DETAILS OF ECO-SENSITIVE AREA, IF ANY, IN THE DISTRICT:**

Kuldiha Wildlife Sanctuary, located in Balasore district and extending into parts of Mayurbhanj and Keonjhar districts of Odisha, covers an area of about 272.75 sq. km and was established in 1984. It lies near Nilgiri town, with an altitude ranging from 50 to 650 meters above sea level, and forms part of the Eastern Highlands moist deciduous forest ecosystem. The sanctuary's terrain is hilly and undulating, consisting of dry and moist Sal forests and mixed tropical vegetation dominated by Sal, Piasal, Sisu, Asan, Bija, Kumbhi, Mahua, Kend, and Bamboo. Rich in biodiversity, Kuldiha is known for its population of Indian elephants and serves as a vital link in the Similipal–Kuldiha–Hadgarh Elephant Corridor. Other major fauna include leopards, gaurs, sambar and barking deer, wild boar, sloth bears, jungle cats, giant squirrels, pangolins, hornbills, peafowls, woodpeckers, and various reptiles such as pythons and monitor lizards. The sanctuary supports rich avifauna and medicinal plant diversity, providing livelihood opportunities for local tribal communities through forest produce. To protect its ecological integrity, the Ministry of Environment, Forest and Climate Change declared an Eco-Sensitive Zone (ESZ) around Kuldiha under notification S.O. 2539(E) dated 9 August 2017, varying from 0.5 km to 7 km in width. This ESZ regulates developmental activities, minimizes human–wildlife conflict, and preserves the natural habitat. The sanctuary forms an important conservation area for elephants and other wildlife, though it faces challenges such as habitat fragmentation, deforestation, grazing pressure, and human–animal conflict. Kuldiha is accessible from Balasore railway station (40 km) and Bhubaneswar airport (200 km), with nearby attractions like Panchalingeswar Temple, Nilgiri Palace, and Similipal National Park. The best time to visit is from November to February when the weather is pleasant for eco-tourism and wildlife observation.

## **21. IMPACTS OF MINING ON ENVIRONMENT (AIR, WATER, NOISE, SOIL, FLORA & FAUNA, LAND USE, AGRICULTURE, FOREST ETC.) DUE TO MINING ACTIVITY:**

### **❖ Activities attributed to Mining**

Generally, the environment impact can be categorized as either primary or secondary. Primary Impacts are those, which are attributed directly by the project. Secondary impacts are those which are indirectly induced and typically include the associated investment and changed pattern of social and economic activities by the proposed action. The impact has been ascertained for the project assuming that the pollution due to mining activity has been completely spelled out under the base line environmental status for the entire ROM which is proposed to be exploited from the mines.

### **❖ Impact on Ambient Air**

Mining operation are carried out by opencast manual, semi mechanized/ mechanized methods generating dust particles due to various activities likes, excavation, loading, handling of mineral and transportation. The air quality in the mining areas depends upon the nature and concentration of emissions and meteorological conditions.

The major air pollutants due to mining activities include: -

- Particulate matter (dust) of various sizes.
- Gases, such as Sulphur dioxide, oxides of nitrogen, carbon monoxide etc. from machine & vehicular exhaust. Dust is the single air pollutant observed in the open cast mines. Diesel operating drilling machines, blasting and movement of machineries/ vehicles produce NO<sub>x</sub>, SO<sub>2</sub> and CO emissions, usually at low levels. Dust can be of significant nuance surrounding land user and potential health risk in some circumstances.

### **❖ Water Impact**

Sometimes the mining operation leads to intersect the water table causing ground water depletion. Due to the interference with surface water sources like river, nallah etc. drainage pattern of the area is altered.

### **❖ Noise Impact**

Noise pollution mainly due to operation of machineries and occasional plying of machineries. These actives will create noise pollution in the surrounding area.

### ❖ **Impact on Land environment**

The topography of the area will change certain changes due to mining activity which may cause some alteration to the entire eco system.

### ❖ **Impact on Flora & Fauna**

The impact on biodiversity is difficult to quantify because of it's diverse and dynamic characteristics. Mining activities generally result in the deforestation, land degradation, water, air and noise pollution which directly or indirectly affect the faunal and flora status of the project area.

However, occurrence and magnitude of these impacts are entirely dependent upon the project location, mode of operation and technology involved.

## **22. REMEDIAL MEASURES TO MITIGATE THE IMPACT OF MINING ON THE ENVIRONMENT:**

### ❖ **Air**

Mitigation measures suggested for air pollution controls are to be based on the baseline ambient air quality of the project/cluster area and would include measures such as:

- Dust generation shall be reduced by using sharp teeth of shovels.
- Wet drilling shall be carried out to contain the dust particles.
- Controlled blasting techniques shall be adopted.
- Water sprinkling on haul roads, service roads and overburden dumps will help in reducing considerable dust pollution.
- Proper and regular maintenance of mining equipment's have to be undertaken.
- Transport of materials in trucks are to be covered with tarpaulin.
- The mine pit water can be utilized for dust suppression in and around mines area.
- Information on wind diction and meteorology are to be considered during planning, so that pollutants, which cannot be fully suppressed by engineering techniques, will be prevented from reaching the nearby agricultural land, if any.
- Comprehensive greenbelt around overburden dumps and periphery of the mining projects/clusters has to be carried out to reduce to fugitive dust transmission from the project area in order to create clean & healthy environment.

## ❖ Water

- Construction of garland drains and settling tanks to divert surface run – off of the mining area to the natural drainage.
- Construction of checks dams/ gully plugs at strategic places to arrest silt wash off from broken up area.
- Retaining walls with weep hole are to be constructed around the mine boundaries to arrest silt wash off.
- The mined-out pits shall be converted in to the water reservoir at the end of mine life. This will help in recharging ground water table by acting as a water harvesting structure.
- Periodic analysis of mine pit water and ground water quality in nearby villages are to be undertaken.
- Domestic sewage from site office & urinals/latrines provided within ML/QL areas is to be discharged in septic tank followed by soak pits.

## ❖ Noise

- Periodic maintenance of machineries, equipments shall be ensured to keep the noise generated within acceptable limit.
- Development of thick green belt around mining/cluster area, haul roads to reduce the noise.
- Provision of earplugs to workers exposed to high noise generating activities like blasting, excavation site etc. Worker and operators at work sites will be provided with earmuffs.
- Conducting periodical medical check-up of all workers for any noise related health problems.
- Proper training to personnel to create awareness about adverse noise related effects.
- Periodic noise monitoring at locations within the mining area and nearby habitations to assess efficacy of adopted control measures.
- During blasting optimum spacing, burden and charging of holes will be made under the supervision of competent qualified mines foreman, mate etc.

## ❖ Biological Environment

- Development of green belt/gap filling saplings in the safety barrier left around the quarry area/ cluster area.

- Carrying out thick greenbelt with local flora species predominantly with long canopy laves on the inactive mined out upper benches.
- Development of dense poly culture plantation using local floral species in the mining areas at conceptual stage if the mine is not continued much below the general ground level.
- Adoption of suitable air pollution control measures as suggested above.
- Transport of materials in trucks covered with tarpaulin.

### **23. RECLAMATION OF MINED OUT AREA**

As per statute all mines/quarries are to be properly reclaimed before final closure of the mine. Reclamation of exhausted mines are planned to be undertaken in below three possible means:

1. If, substantial amount of waste is there, the exhausted quarry can be fully or partly backfilled using the stored waste. The backfilled areas are to be brought under plantation of local species.
2. If the generation of waste is much less as in the case of minor mineral mining, the exhausted quarries can be reclaimed by
  - a. Plantation on the broken-up surface if the depth of quarry is not much below the surrounding surface level.
  - b. Converted to water reservoir after stabilization of the slopes if the exhausted quarry continues much below the surrounding surface level. It is preferred to cordon the water reservoir either through wire fencing or retaining wall with plantation from the safety point of view. Most of the quarry/mining lease areas are yet to be exhausted from ore point of view. Hence, reclamation would be taken up only after exhaustion of the ore/mineral content from these areas. The exhausted minor mineral quarries of the district have been converted to water reservoirs.

### **24. RISK ASSESSMENT AND DISASTER MANAGEMENT PLAN:**

The only risk involved related to mining of minor mineral excepting natural calamities is slope failure and probable accidents due to high and ill maintained bench walls. This can only be addressed through making of regular benches and undertaking mining in benching pattern. The disaster management plan (DMP) is supposed be a dynamic, changing, document focusing on continual improvement of emergency response planning and arrangements. The disaster management plan is to be aimed to ensure safety of life, protection of environment, protection of installation, restoration of production and savage operations in this same order of priorities. For effective implementation of the disaster management plan, it should be widely circulated through rehearsal/induction conducted by the respective department from time to time.

### ❖ **General responsibilities of employees' during an emergency:**

During an emergency, it becomes more enhanced and pronounced when an emergency warning is raised, the worker in charge, should adopt safe and emergency shut down and attend to any prescribed duty. If no such responsibility is assigned, the workers should adopt a safe course to assembly point and wait instructions. He should not resort to spread panic. On the other hand, he must assist emergency personnel towards objectives of DMP.

### ❖ **Co-ordination with local authorities:**

The Mine Manger who is responsible for emergency will always keep a jeep ready at site. In case of any eventuality, the victim will be taken to the nearby hospitals after carrying out the first aid at the site. The Manger should collect and have adequate information of the nearby hospitals, fire station, police station, village panchayat heads, taxi stands, medical shops, district revenue authorities etc. and use them efficiently during the case of emergency.

### ❖ **Other instructions need to be followed:**

Mining activity because of the very nature of the operation, complexity of the systems, procedures and methods always involves some amount of hazards. Hazard identification and risk analysis is carried for identification of undesirable events that can leads to a hazard, the analysis of hazard mechanism by which this undesirable event could occur and usually the estimation of extent, magnitude and likelihood of harmful effects. The activities which can cause high risk related to face stability and the person blasting the shots. It was observed that on a working face of the mine, there were large cracks and unsupported rocks were present, which can lead to a serious hazard and injure workers engaged in loading operation and machineries because of rock falls or slides. This type of condition turns out because improper dressing of the bench and improper supervision. To avoid the hazards due to fall of rocks the face must be examined, made suitable for working and the remedial measures must be taken to make it safe if there is any doubt that a collapse could take place. Working of the face should be in the direction taking into account the geology of the area such that face and quarry side remain stable. Another major risk identified in mines is due to the firing of explosive by an unqualified person. In the mines there is problem of fly rocks and the village is located close to the mine and so it is rated high as it can affect may people. Explosives by nature have the potential for the most serious and catastrophic accident. Planning of round of shots, holes correctly drilled, direction logged, weight of explosive suitable for good fragmentation are the few of the steps necessary to ensure its safe use and if the shots are not properly designed can result in misfires, early ignition and flying rocks. No person is allowed to use explosives without being properly trained in its handling. In the mine large numbers of heavy vehicles were in operation and the roads were not proper for haulage purpose. The haulage roads were not even and were not wide enough for the crossing purpose and hence the chances of hazards are very high. The main hazards arising from the use large earth moving vehicles are incompetent drivers, brake failure, lack of all-around visibility from the driver position, vehicle movements particularly reversing, roll over, and maintenance. Those most at risk are the driver and pedestrians likely to be struck by the vehicle, and drivers of smaller

vehicles, which cannot be seen from the cabs of large vehicles. Edge protection is always necessary to prevent inadvertent movement over the edge of roadway or a bench. Seatbelt will protect driver in case of roll. Good maintenance and regular testing are necessary to reduce the possibility of brake failure. Access to the vehicles should always be restricted to those people necessary for the work in hand. The use of personal protective equipment and proper arrangements is essential to check if the person is wearing protective equipment or not. The personal protective equipment includes helmet, non-skid safety boots, safety glasses, earmuffs etc. The required personal protective equipment should be provided and used in a manner that protects the individual from injury. Few minor injuries which can be prevented are slip, trip, or fall hazards; hazards due to rock falls and collapse of unstable rocks, atmosphere containing toxic or combustible gases; protects from chemical or hazardous material etc. A disaster management plan should be prepared for taking care of for any disaster. Other risks which are included in this category are noise, as it occurs and it can lead to permanent disability. There are problems related to road traffic in and out issuers; inappropriate exposure of moving machines; mechanical failure and because of large number of moving trucks and dumpers there is large quantity of dust present in roadways which affects the operators and can lead to accidents causing injury. They are in acceptable range because of precautions measures taken but no step is taken it can cause hazard hence steps should be taken to reduce the hazards such as for dust suppression system should be installed. Other problems like occurrence of lots of mosquitoes in the area due to unhygienic conditions which affect the human health causing malaria, dengue etc. and causing a person to be hospitalized. Disaster in the mines like fires, explosions, entrapments, and inundations can occur any time, so emergency preparedness is a must. The Disaster management plan and risk assessment in the mines will include all sorts of above-mentioned emergency and the extent that this plan will be implemented will depend on the nature and scope of the emergency. The basic purpose of Disaster management plan and risk assessment to ensure that mine rescue and recovery activities are conducted safely for rescuer and survivors. According to MMR act 1961 a standard operating procedure should be drawn for involvement different category of staff and officers. The SOP should be updated periodically to reduce the chaos and response to the emergency should be quick and smooth. The responsible person should be familiar with his responsibility during the mock drills. One or two standbys should be there to replace the person in Emergency situation. Rescue operations should not include the survivors for any assistance. First Information of Disaster / Emergency should go to the attendance clerk on duty. Duties of attendance Clerk (Emergency Siren) the attendance clerk or other designated person should on getting information of major accident, sound a hooter or a siren immediately declaring a state of emergency at the mine and then to contact the manager and on his advice to call key personnel using the information listed in the Emergency Organization Chart. It is important that all telephone calls are recorded in a telephone log book. Duties of Other Officials should be displayed and handed over to all concerned. Copy the same should be kept at Manager's Office for ready reference. Establishment of Control Room at Unit Level, Area Level and Company Level is essential. Control Room should keep the contact information about –

- Company Manager
- Company owner/ Administrative officer

- District Administration
- Govt. Hospitals in Nearby Localities
- Private Nursing Homes of Localities

Attendance roaster and duty charge register should be properly maintained so the record of missing people can be obtained.

## 25. DETAILS OF THE OCCUPATIONAL HEALTH ISSUE IN THE DISTRICT:

The persons employed in the mines are exposed to a number of hazards at work which adversely affect their health. Some of the important ones are dust, noise, heat, humidity, vibration etc. In recent times, there has been increasing awareness among mining industry and the workers about occupational diseases such as Pneumoconiosis, Silicosis, Manganese Poisoning, Tuberculosis, Hearing Impairment etc. caused by exposure to health hazards at work. Almost all occupational diseases are known to cause permanent disablement and there is no effective treatment. However, all occupational diseases can be prevented by adopting proper occupational health measures and engineering control on airborne dust at workplace.

Occupational Diseases in mines or industry is required to conduct medical examinations and health surveillance of workers as per the provisions of Mines Act. The present efforts of mines management are concentrated on detection of silicosis, Pneumoconiosis and other notified diseases. The essential features of health surveillance programme required to be carried out in mines are: (a) Initial Medical Examination of persons to be conducted at the time of appointment. (b) Periodic Medical Examination or General physical examination to be conducted once in every year. (c) Maintenance of medical records and health services till the person is in service.

Following diseases have been notified as the diseases connected with mining operations for the purpose of sub-section (1) of Section 25 of the Mines Act, 1952:

### **S.R.O. 1306 dated the 21st July, 1952**

1. Silicosis
2. Tuberculosis
3. Total Number of TB cases in Balasore District of last 5 years

| Year    | No. of Cases notified/ detected | No. of TB cases under Treatment. |
|---------|---------------------------------|----------------------------------|
| 2020-21 | 1767                            | 1759                             |
| 2021-22 | 2143                            | 2133                             |
| 2022-23 | 2753                            | 2748                             |
| 2023-24 | 2603                            | 2598                             |
| 2024-25 | 2804                            | 2797                             |

**S.R. O. 2521 dated the 26th June, 1986**

Cancer of lung or the stomach or the pleura and peritoneum (i.e. mesothelioma).

**S.O. 399(E) dated 21st February, 2011**

1. Noise Induced Hearing Loss
2. Contact Dermatitis caused by direct contact with chemical.
3. Pathological manifestations due to radium or radioactive substances

System of Detection of Occupational Diseases in Mines In order to detect occupational diseases the industry is required to conduct medical examinations and health surveillance of workers as per the provisions of Mines Act. The present efforts of mines management are concentrated on detection of silicosis, Pneumoconiosis and other notified diseases. Very little attention is paid to other occupational diseases. The essential features of health surveillance Programme required to be carried out in mines are:

- (a) Initial Medical Examination of persons to be employed in mines.
- (b) Periodic Medical Examination once every five years. General physical examination, chest radiographs, lung function tests and audiometry.
- (c) Classification of chest radiographs of workers as per ILO Classification.
- (d) Medical examination within one year of superannuation. Evaluation of all cases of suspected pneumoconiosis by Pneumoconiosis Medical Board.
- (e) Maintenance of medical records till the person is in service and 10 years thereafter. The cases of silicosis detected during health surveillance Programme are referred to Pneumoconiosis Medical Board of the mining companies for evaluation and certification. If certified, the case is notified to the enforcement authority and evaluated for disability and payment of compensation. Many cases of silicosis and other pneumoconiosis go undetected and a large number of cases of silicosis are misdiagnosed due to lack of training of medical professionals.

**26. PLANTATION GREEN BELT DEVELOPMENT IN RESPECT OF LEASE ALREADY GRANTED IN THE DISTRICT:**

During mining operation green belt development through plantation is most important for environment safe guard, which should be supervision by mining department. Different type of species should be planted near lease periphery to keep environment clean at post mining period through reclamation. Where specific usefulness of land could be decided, afforestation is normally planned through the site could have been considered for better possibilities of land use.

| Sl. No. | Lease Name   | Plantation Area in Ha. | Nos. of trees Planted | Remarks |
|---------|--|------------------------|-----------------------|---------|
| A1      | Sarisua Kapilajhari Bandhanata Stone Quarry No. 1  | 0.05                   | 100                   | Nil     |

The details of plantation and Green Belt development for already granted leases in the district have been compiled based on available data. In cases where information is not available, the proposed future plan for plantation and green belt development must be clearly outlined.

## 27. ANY OTHER INFORMATION:

To meet the requirement of minerals in the present scenario, it is proposed to identify such potential areas at certain interval and get the data bank of DSR to be updated regularly. The mining activity in any area is on one hand bring revenue and employment (Direct and indirect) and on other hand if not done properly potential pollution and ecological imbalance increases, the ability of the ecosystem can also be reduced. Particulate matter transported by the wind as a result of excavations, blasting, transportation of materials, heavy equipment used raise these particulate levels; and Gas emissions from the combustion of fuels in stationary and mobile sources, explosions, and mineral processing. All these activities indirectly affected the biodiversity of area. Larger potential and smaller areas have been identified in Balasore District on the basis of geological study carried out during field observation, which can be considered for mining concession after all the parameters for statutory clearances are verified by consulting with concerned authorities.

### **Observation of Forest Department:**

The Minor Mineral (Stone) Sources have been identified in the Khaira, Nilgiri, and Soro Tahasils of Balasore District based on the availability of resources. Before finalizing the District Survey Report, it is mandatory to ensure that the involvement of various forest categories, such as Reserved Forests, Forests as per Revenue Records, Forests as on 25.10.1980, and areas under Sanctuary, Eco-Sensitive Zone, and Conservation Reserve is thoroughly assessed.

A joint verification of DLC Forest land and the involvement of Eco-Sensitive Zones and Sanctuaries was conducted by Forest and Revenue officials on 17.03.2022. As per the findings of this joint verification, the Khanjamahal Stone Quarries (Closter Approach) have been confirmed, and no further verification is required for the 63 Stone Quarries in Khanjamahal village (Closter Approach) under Soro Tahasil.

However, the Minor Mineral (Stone) Sources in the Khaira and Nilgiri Tahasils still need to undergo field verification to determine the involvement of Forests, as defined above, including Reserved Forests, Forests as per Revenue Records, Forests as of 25.10.1980, as well as the impact on Sanctuaries, Eco-Sensitive Zones, and Conservation Reserves.

## LEASE / POTENTIAL MAP OF ROAD METAL

## Certification regarding preparation of DSR (Stone) of Balasore District

The District Survey Report of Road Metal (Minor Mineral) of Balasore District in accordance with Appendix-X, Para-7 (ii) (a) of S.O 3611(E) dt. 25.07.2018 of ministry of Environment, Forest & Climate Change, New Delhi, Enforcement & Monitoring Guideline for Sand Mining-2020 and in compliance with the orders of Hon'ble Supreme Court dt. 10.11.2021 in the connection of C.A Nos-3661-3662, of 2020. Before preparation of this report, filed verification has been conducted by the Sub-Divisional Committee of Balasore & Nilgiri Sub-Divisions consisting of Sub-Divisional Magistrate, Officers from irrigation Department, State Pollution Control Board, Forest Department, Geology Department & Mining Officer. The Final DSR is being submitted to SEIAA, Odisha, Bhubaneswar for approval.

## Final Details of Sand/M-Sand Sources

## a) Rivers:

| River Name/M-Sand Plant | Total Stretch of River (in KM) | Type of River (Perennial or Non-Perennial) |
|-------------------------|--------------------------------|--|
| Budhabalanga            | 300 K.M                        | Perennial                                  |
| Subarnarekha            | 1075K.M                        | Perennial                                  |
| Jalaka                  | 330 K.M                        | Perennial                                  |
| Sona                    | 255 K.M                        | Perennial                                  |
| Kansabansa              | 721 K.M                        | Perennial                                  |

## b) De-Siltation Location: (Lakes/Ponds/Dams etc.)

| Name of Reservoir/ Dams              | Maintain/Controlled by State Govt./PSU etc. | Location | District | Tehsil | Village | Size (Ha) |
|--------------------------------------|---|----------|----------|--------|---------|-----------|
| Not applicable for Balasore District |   |          |          |        |         |           |

## c) Patta Lands/Khatedari Land:

| Owner                                | Sy. No | Area (Ha) | District | Tehsil | Village | Agricultural Land (Yes/No) |
|--------------------------------------|--------|-----------|----------|--------|---------|----------------------------|
| Not applicable for Balasore District |        |           |          |        |         |                            |

## d) M-Sand Plants:

| Plant Name                           | Owner | District | Tehsil | Village | Geolocation | Quantity Tonnes/ Annum |
|--------------------------------------|-------|----------|--------|---------|-------------|------------------------|
| Not applicable for Balasore District |       |          |        |         |             |                        |

## Final List of Potential Mining Leases (existing &amp; proposed)

| Sl No. | Lease Details                                      | Area (in Ac) | Distance (in KM) from PA/BR/WC/           | Distance from Forest Area (in KM)         | Mining leases within 500 meters (if yes cluster area) | Total excavation in CUM /Annum | Mineral to be mined in 5 years in Cum | Existing/Proposed |
|--------|--|--------------|---|---|---|--------------------------------|---------------------------------------|-------------------|
| A1     | Sarisua Kapilajhari Bandhanata Stone Quarry No. 1  | Ac 0.371     | More than 3.5 Kms from Wildlife Sanctuary | More than 3.5 Kms from Wildlife Sanctuary | Sarisua Kapilajhari Bandhanata Stone Quarry Cluster-B | 2500 C.M.                      | Road Metal                            |                   |
